The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 3 rejected under 35 U.S.C. 102(e) as being anticipated by Ito et al.

With respect to claim 1, Ito discloses a condensate demineralizer for demineralizing condensate in a nuclear power plant (see lines 37-40 of col. 2), comprising a mixed bed of a strongly acidic gel-type cation exchange resin (see lines 47-52 of col. 2 and lines 24-29 of col. 4) and a uniform particle size strongly basic porous anion exchange resin (see lines 22-48 of col. 5, especially line 39 which mentions DOWEX MSA-1), the anion exchange resin (DOWEX MSA-1) as having an average particle size of 500-1000 micron and a particle size distribution in which 95% or more of resin particles are within the range of the average particle size  $\pm$  100 micron (see the Dowex Marathon MSA Product information Sheet).

Regarding claim 3, Ito et al disclose a method for demineralizing condensate in a nuclear power plant by using the condensate demineralizer of claim 1 or 2 (see lines 34-40 of col. 2).

Applicant's arguments filed 9-12-08 have been fully considered but they are not persuasive.

Applicant's argues that Dowex MSA-1 is not a uniform particle size anion exchange resin, however, such an argument is clearly in error since the enclosed Dowex product information clearly states that the MSA-1 resin is uniform in size and includes 95-100% whole beads having a particle size of 640 +/- 50 micron as currently claimed.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
